TO WHOM IT MAY CONCERN

During spring 2005, we wanted to make a ten-minute movie on the five-year project called Oxygen, which was coming to a close. The movie was to highlight our technical accomplishments, and also serve as a recruiting video for the second phase of the project. After interviewing several local companies, we settled on DigINovations, because we were impressed with what they had done, and with the fact that they seemed to know exactly what we wanted from the start. We also received endorsements from others who have worked with them before.

What happened during the ensuing 60 days was nothing short of spectacular. The creative team of Michael Kolowich and Kirstin Lynde managed to gain over a short period an excellent grasp of the research that we had conducted over the five year period, to the extent that they were able to communicate in layman's terms what we have accomplished much better than we could have. The script written by them was so close to perfect that I only had to make minor modifications. The story telling, weaving demonstrations with interviews, was masterful. The final product was extremely well received by colleagues and sponsors alike. We couldn't be happier.

Over the years I have worked with several video production companies. I would unquestionably rank DigINovations as the best. They produce terrific work in short notice, on time, and in the most pleasant manner. I couldn't be happier with the entire experience. I would recommend them without equivocation, and I would not hesitate to work with them in the future.

Sincerely,

A handwritten signature in black ink, appearing to read "U. V. Rane".
